

Day 3 - API Integration Report - SHOP.CO

Table of Contents

- Setting up environment variable
- Scripts to migrate API data to sanity
- Product schema
- Screenshots
- Code snippets for API integration and migration scripts.

Setting up environment variable

```
NEXT_PUBLIC_SANITY_PROJECT_ID=your_project_id  
NEXT_PUBLIC_SANITY_DATASET=production  
SANITY_API_TOKEN=your_sanity_token
```

Ensures .env.local file contains all of these generate token from sanity

Steps <http://localhost:3000/studio> -> click on profile icon on top right then find API click on it and then click on token generate it select developer while selecting role.

Scripts to migrate API data to sanity

First create a scripts folder inside folder create file importSanityData.mjs file write script code there ensures to adjust script code according to API or according to data importSanityData.mjs code will be last of the document.

Then after customization code on package.json file write this on

```
"import-data": "node scripts/importSanityData.mjs"
```

Now package.json looks like

```
"scripts": {  
  "dev": "next dev",  
  "build": "next build",  
  "start": "next start",  
  "lint": "next lint",  
  "import-data": "node scripts/importSanityData.mjs"  
},
```

Now run `npm run import-data` after this command data will start migrating from api to sanity. Sanity we write groq query to render data on frontened

Code snippets for API integration and migration scripts.

Migration from API to Sanity

```
import { createClient } from '@sanity/client';
import axios from 'axios';
import dotenv from 'dotenv';
import { fileURLToPath } from 'url';
import path from 'path';

// Load environment variables from .env.local
const __filename = fileURLToPath(import.meta.url);
const __dirname = path.dirname(__filename);
dotenv.config({ path: path.resolve(__dirname, '../.env.local') });

// Create Sanity client
const client = createClient({
  projectId: process.env.NEXT_PUBLIC_SANITY_PROJECT_ID,
  dataset: process.env.NEXT_PUBLIC_SANITY_DATASET,
  useCdn: false,
  token: process.env.SANITY_API_TOKEN,
  apiVersion: '2021-08-31',
});

// Function to upload an image to Sanity
async function uploadImageToSanity(imageUrl) {
  try {
    console.log(`Uploading image: ${imageUrl}`);
    const response = await axios.get(imageUrl, { responseType: 'arraybuffer' });
    const buffer = Buffer.from(response.data);
    const asset = await client.assets.upload('image', buffer, {
      filename: imageUrl.split('/').pop(),
    });
    console.log(`Image uploaded successfully: ${asset._id}`);
    return asset._id;
  } catch (error) {
    console.error('Failed to upload image:', imageUrl, error);
  }
}
```

```

    return null;
  }
}

// Function to import data
async function importData() {
  try {
    console.log('Fetching products from API...');
    const response = await axios.get('https://template1-neon-nu.vercel.app/api/products');
    const products = response.data;
    console.log(`Fetched ${products.length} products`);

    for (const product of products) {
      console.log(`Processing product: ${product.name}`);
      let imageRef = null;

      // Upload product image if available
      if (product.imageUrl) {
        imageRef = await uploadImageToSanity(product.imageUrl);
      }

      // Map product data to Sanity schema
      const sanityProduct = {
        _type: 'product',
        name: product.name,
        description: product.description,
        price: product.price,
        discountPercent: product.discountPercent || 0,
        isNew: product.isNew || false,
        colors: product.colors || [],
        sizes: product.sizes || [],
        category: product.category || '',
        image: imageRef
          ? {
              _type: 'image',
              asset: {
                _type: 'reference',
                _ref: imageRef,
              },
            }
          : undefined,
      };
    }
  }
}

```

```

        console.log('Uploading product to Sanity:', sanityProduct.name);
        const result = await client.create(sanityProduct);
        console.log(`Product uploaded successfully: ${result._id}`);
    }

    console.log('Data import completed successfully!');
  } catch (error) {
    console.error('Error importing data:', error);
  }
}

// Run the import function
importData();

```

Sanity Schema

```

// schemas/product.js

const customerSheme={
  name: 'product',
  title: 'Product',
  type: 'document',
  fields: [
    {
      name: 'name',
      title: 'Name',
      type: 'string',
    },
    {
      name: 'description',
      title: 'Description',
      type: 'text',
    },
    {
      name: 'price',

```

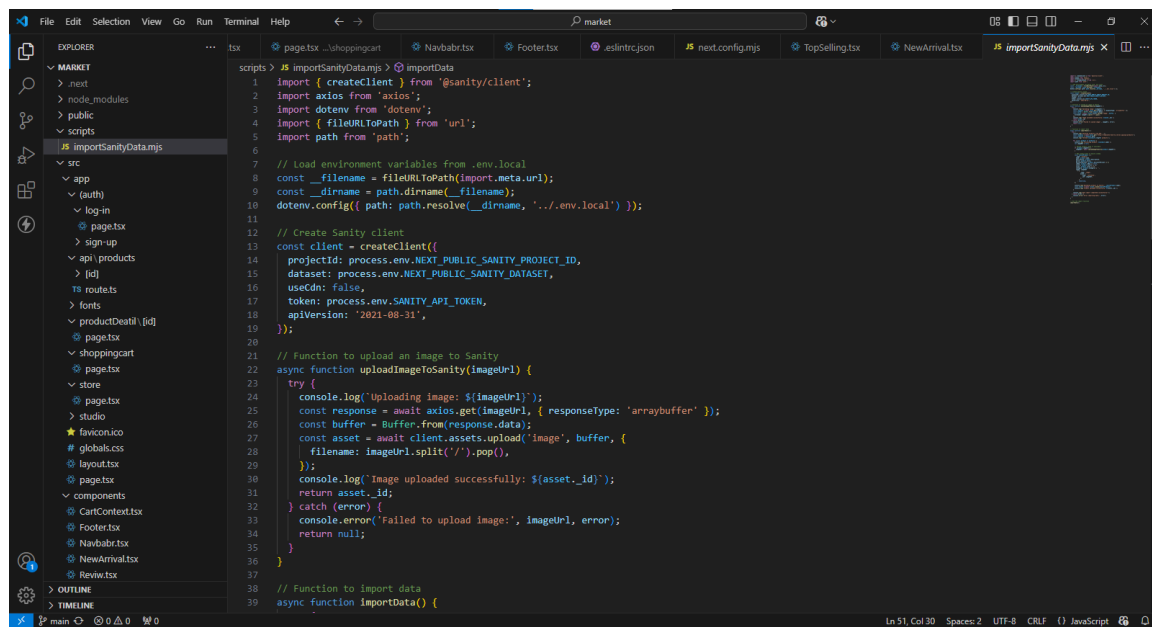

```
      title: 'Price',
      type: 'number',
    },
    {
      name: 'discountPercent',
      title: 'Discount Percent',
      type: 'number',
    },
    {
      name: 'isNew',
      title: 'Is New',
      type: 'boolean',
    },
    {
      name: 'colors',
      title: 'Colors',
      type: 'array',
      of: [{ type: 'string' }],
    },
    {
      name: 'sizes',
      title: 'Sizes',
      type: 'array',
      of: [{ type: 'string' }],
    },
    {
      name: 'category',
      title: 'Category',
      type: 'string',
    },
  ],
```

```

    {
      name: 'image',
      title: 'Image',
      type: 'image', // This should match the data structure you're sending
      options: {
        hotspot: true, // Optional, for cropping
      },
    },
  ],
],
};

export default customerScheme

```
